KeePass
Emergency Sheet

29/06/2023

Database file:

The path behind that box is not needed for the lore and I would apprecate if it could remain private please. ts.kdbx   Desktop_pet\LORE\Though

You should regularly create a backup of the database file (onto an independent data storage device). Backups are stored here:

No backups, to dangerous

Master Key

The master key for this database file consists of the following components:

- **Master password:**

0101011101010011010001100111011001100010000001101001011001100110010101101110011011 0000100000

- **Key file:**

The path behind that box is not needed for the lore and I would apprecate if it could remain private please. ORE\planning\Thoughts.keyx   desktop_pet_home\L

You should create a backup of this file. Backups are stored here:

No backups, to dangerous

Instructions and General Information

- A KeePass emergency sheet contains all important information that is required to open your database. It should be printed, filled out and stored in a secure location, where only you and possibly a few other people that you trust have access to.

- If you lose the database file or any of the master key components (or forget the composition), all data stored in the database is lost. KeePass does not have any built-in file backup functionality. There is no backdoor and no universal key that can open your database.

- The latest KeePass version can be found on the KeePass website: https://keepass.info/.

I*********.HL
step 1: reverse string
step 2: Apply a Cesar (shift 10)
step 3: set it to base32
